

## How to Get Started

1

Talk to your counselor or our Nurse Navigator to start the process

2

Before the 1st injection you will take buprenorphine orally for 7 days

3

You will receive your 1st injection of Sublocade and continue to receive it monthly (at least 26 days in between each dose)

## Benefits of Sublocade

Sublocade is safe to use while pregnant

Sublocade does not give you a feeling of being "high" which helps reduce cravings

Medications like Motrin, Aspirin, and Naproxen are safe to take as needed

Sublocade is an extended release medication so there are no daily up and downs

Sublocade is prescribed and provided on-site so there is no need to go to a pharmacy

Less hassle than other forms of MAT as you are not responsible for taking it daily

Only takes approximately 15 minutes to receive the Sublocade injection monthly

# Sublocade

Sublocade is a once-monthly injection administered by a treatment provider

The shot is injected into the abdomen just under the skin as a liquid which forms into a gel

Sublocade is designed to deliver buprenorphine at sustained levels between injections

Sublocade blocks the rewarding effects of opioids which are the feelings that can keep people using

Sublocade begins working within a few hours after injection

***Sublocade is a form of MAT for those with Opioid Use Disorder***
